MySQL

Projects

Lane Line Detection - 2nd December - 18th December 2021, Project Assigned by College.

Lane Line detection is a critical component for self driving cars and also for computer vision in general. This concept is used to describe the path for self-driving cars and to avoid the risk of getting in another lane.

Face Detection - 12th September - 5th October 2021, Project Assigned under Internship Period.

The goal of this project is to detect and locate human faces in a color image. A set of seven training images were provided for this purpose. The objective was to design and implement a face detector in MATLAB that will detect human faces in an image similar to the training images.

With Integration of APIs using Python - February 2021 - March 2021, Project assigned by college.

We created invitation which will be sent in mail and it will keep that event as a reminder in Client/user's Google calendar
